## 1. MAKING API CALLS

API calls need to be made programmatically in regular intervals to obtain the constant stream of data for your respective development or research needs. For illustration purposes, the API call below is being made via a third-party application – Postman.

Steps to making an API call:

1. Download and install the Postman from <https://www.getpostman.com/>. Fire it up!
2. Make sure Http method is set to GET.
3. Enter the URL (refer to subsequent pages in this document) in the field **request URL**.
4. Enter your AccountKey under **Headers**.
5. **(OPTIONAL STEP)** The "accept" header allows you to specify the response format of your API call. Default is JSON. Specify "application/atom+xml" for XML.
6. Click on the **Send** button.

### Version 5.5 (04 Apr 2023)

Figure 2-2 below shows the JSON response of an API call made for the Traffic Incidents dataset.

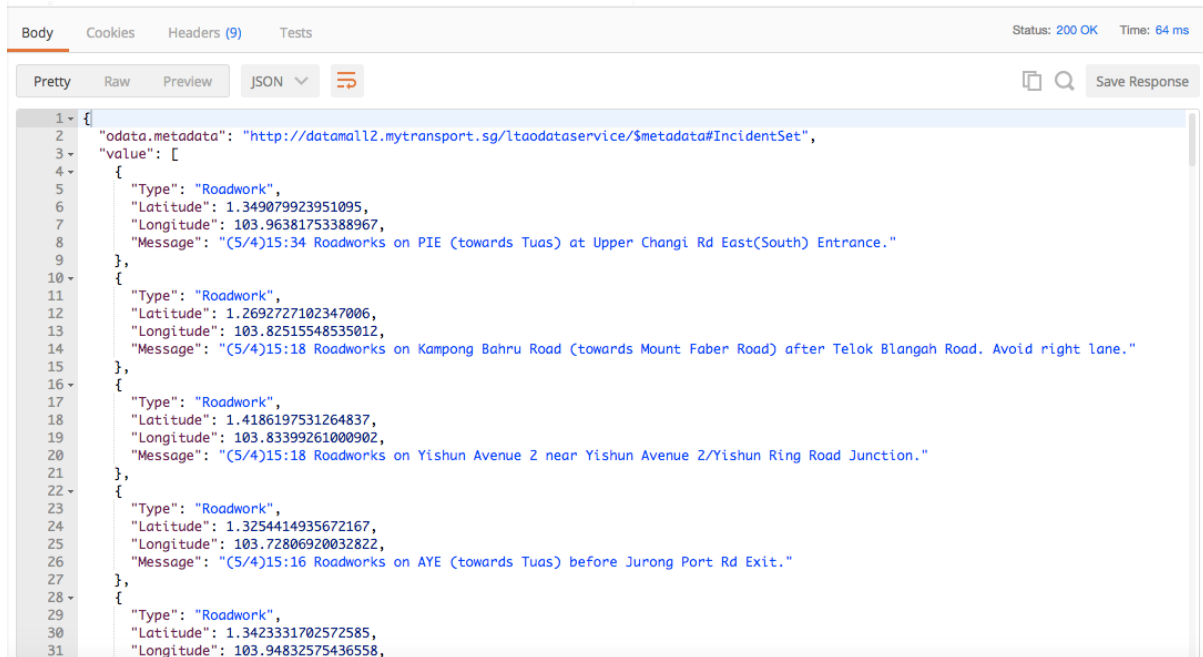

Figure 2-2: API (JSON) Response as shown on Postman.

With the exception of the following Bus Arrival API listed below (see Table 1), API responses returned are limited to 500 records of the dataset per call. This number may be adjusted from time to time.

To retrieve subsequent records of the dataset, you need to append the **\$skip operator** to the API call (URL). For example, to retrieve the next 500 records (501<sup>st</sup> to the 1000<sup>th</sup>), the API call should be:

[http://datamall2.mytransport.sg/ltaodataservice/BusRoutes?\\$skip=500](http://datamall2.mytransport.sg/ltaodataservice/BusRoutes?$skip=500)

To retrieve the following set of 500 records, append '**?\$skip=1000**', and so on. Just remember, each URL call returns only a max of 500 records!

API	Response Size
Bus Arrival	Not Applicable. Depends on parameter supplied.
Train Service Alerts	Not Applicable. Depends on the scenario.
Passenger Volume related	Returns one record per request.
Taxi Stands	Not Applicable. Dataset is too small.

### Version 5.5 (04 Apr 2023)

Following is a guide on how you can generate sample code snippets from Postman.

1. After setting up on Postman to make an API call as per the steps in *Figure 2-1*, select the code icon `</>` in the right panel of the Postman application.

Figure 2-3

2. Use the dropdown list to select the code snippet in the desired programming language.

Figure 2-4

3. Code snippet will be automatically generated in the chosen programming language.

```
1 var settings = {
2   "url": "http://datamall2.mytransport.sg/
    ltaodataservice/TrafficSpeedBandsv2",
3   "method": "GET",
4   "timeout": 0,
5   "headers": {
6     "accountKey": "6HsAmP1e0R/
        EkEYW0cjKg=="
7   },
8 };
9
10 $.ajax(settings).done(function (response)
11 {
12   console.log(response);
13 });
```

## ADVISEMENT ON FRONT-END IMPLEMENTATION (BUS APPS)

### 1. [EstimatedArrival] Display of Advise ment Messages when there is NO Bus Arrival Data

In the event where data is not available (be it in partial or in full) on the API, you may want to display some form of 'status texts' to advise your app users on what's going on, as far as bus service availability is concerned. To do this, you will need to take reference from two data points – (1) the presence or **absence** of Arrival data itself, and (2) the **bus service operating hours at each bus stop** which you need to obtain via the **Bus Routes API**.

With those two data points gathered, you will arrive at the following possible scenarios:

#	Operation Status	Data Availability	Advise ment Message
a.	Bus is in operation	Arrival data is available	(none required)
b.	Bus is in operation	Arrival data is NOT available	"No Est. Available"
c.	Bus is NOT in operation	Arrival data is NOT available	"Not In Operation"
d.	Bus is NOT in operation	Arrival data is available	(none required)

For scenarios (b) and (c), you may display advise ment messages like those suggested in the table above, or any other user-friendly and appropriate variants at your discretion.

Next, you should note that Arrival data may be available on the API even when bus services are supposedly NOT in operation (as per scheduled operating hours) – reflected as scenario (d) in the table above. This happens,

- before first bus(es) begin their service from Bus Interchanges / Depots in the mornings, and,
- when last bus(es) at night are running behind schedule; slightly past operating hours.

Therefore, the general logic to be applied, is to **always first display the Arrival data if it's available on the API**, irrespective of the scheduled operating hours. Advise ment messages like "No Est. Available" and "Not In Operation" are applicable ONLY when there is no Arrival data on the API.

## 2. [EstimatedArrival] Rounding of Seconds

All derived bus arrival duration should be rounded down to the nearest minute.

Derived duration: 3:49 mins  
Display duration: "3 min"

Derived duration: 2:07 mins  
Display duration: "2 min"

Derived duration: 1:59 mins  
Display duration: "1 min"

Derived duration: 0:59 mins  
Display duration: "Arr"

## 3. [Load] Colour Scheme Adoption

You may adopt this colour scheme to serve as visual indicators for the various loading values:

- [Green] Seats Available
- [Amber] Standing Available
- [Red] Limited Standing

You are given the flexibility for the manner in which you display the colours, i.e. colour bars, coloured timings, and accompanied with legends where appropriate and/or necessary.

## 4. [Feature] Wheelchair Accessible Buses

You are given the flexibility to display any symbols or labels  to denote oncoming buses that are wheelchair accessible.

## ADDITIONAL NOTE ON LOOP SERVICES THAT RUNS BOTH DIRECTIONS

Please note that some Loop Services are appended with 'G' or 'W' to denote their direction of travel. You should account for and display these services individually – 225G, 225W, 243G, 243W, 410G, 410W.

## ANNEX F

### DESCRIPTION OF ROAD CATEGORIES FOR TRAFFIC FLOW

S/No	Road Category	Description
1.	CAT1	Expressways Form the primary network where all long-distance traffic movements should be directed. It is planned to optimise long distance mobility from one part of the island to another
2.	CAT2	Major Arterials Predominantly carry through traffic from one region to another, forming principal avenues of communication for urban traffic movements. It interconnects expressways and minor arterial as well as with other major arterial roads
3.	CAT3	Minor Arterials Distribute traffic within the major residential and industrial areas. It is planned to optimise circulation within the area and facilitate through traffic between adjacent towns
4.	CAT4	Primary Accesses Form the link between local accesses and arterial roads. It provides access to developments and through traffic is discouraged. However, where a development is also accessible by a local access road, the access shall be located at the local access road
5.	CAT5	Local Accesses Give direct access to buildings and other developments and should connect only with primary access
6.	SLIP_ROAD	Slip Roads Connect roads to allow motorists to change roads without entering an intersection
